Patient Safety 2021: Driving Quality and Improvement in Care

ONLINE EVENT
30TH NOVEMBER

IGPP Institute of Government & Public Policy | University of East London

About the event

4,356,277 reports of patient safety incidents were reported between November 2018 and October 2019. These incidents were linked to more than 4,600 deaths. The cost of harm for clinical negligence claims from incidents in 2019/20 expected to cost the NHS £8.3 billion. Improving patient safety could save almost 1,000 extra lives and £100 million in care costs each year from 2023/24.

This event draws upon a number of the key themes of the Patient Safety Strategy, reviews its progress, and reflects on the impact of Covid-19 on patient safety initiatives. It will highlight good practice in developing a proactive approach to identifying risks to safe care while also including systems, risks, human factors and organisational culture.

Hear the latest policy updates and practical case studies featuring innovative patient safety interventions across primary and secondary care to save lives and protect patients.

Why attend?

- Explore innovative approaches to work, finances, health and care and housing for the future of an ageing population
- Get an updated overview of the state of ageing in the UK today and hear from senior representatives from central and local government, the NHS, the voluntary sector and academia
- Understand key environmental and social factors that put older people at risk of loneliness
- Assess the impact of increased food costs on the ability of older adults to live a healthy life
- Learn how joint working between healthcare, social services and the voluntary service can be optimised to enable people to age well and prevent avoidable hospital admissions

Agenda

9:30	Online Registration
